

**PROJECT:** Old Terminal Building Refurbishment

**Location:** Bristol

**Value:** £300K

**Timescale:** 4 months

## The Client

Bristol International Airport deal with around 5 million passengers a year and are rapidly expanding year on year and have plans to invest over £100 million over the next five years to enable passenger numbers to grow further.

## The Design Brief

The Old Terminal building was originally built in the 1950s and since then has had large sections added to the building to deal with passenger growth. In the 1990s a new terminal building was built allowing the old terminal building to be used for staff and airline companies. The building has a very distinctive 50s style and the project was to revitalise the common area and reception to give a modern feel.

## Project Delivery

It was decided that the area needed to have an aircraft theme throughout and to achieve this, we helped design and build bespoke second hand aircraft parts such as airplane wings suspended from the atrium roof with integrated spotlights. An engine intake cowl from a Boeing 737 Jet turned into a reception desk and seating and aircraft wheels turned into coffee tables.
